

# Cabinetry clamp, face frames

BES8511

The cabinetry clamp is designed to combine the multiple steps of face frame cabinet installation into one easy process. Face frame stiles can be tightened, aligned, pre-drilled and fastened while the clamp is in place. The clamp holds the individual cabinet edges together while also keeping the faces along the joint flush.

There is also an integrated pilot-hole drilling guide on one end. This guide flips out of the way so you can drive screws to connect the cabinets without removing or repositioning the clamp.

**1 Durable construction**

Heavy duty steel clamp with steel sliding T-bars and aluminum alignment plate provides exceptional strength.

**2 Integrated pilot hole**

Simplifies drilling.

**3 Non-marring felt pads**

Included for clamp faces and alignment plate to protect and cushion points of contact.

**4 Acme threaded screws**

For quick and controlled tightening.

**A Cabinetry clamp, face frames, BES8511**

Professional quality installation is achieved at a fraction of the time compared to the use of more conventional clamps. Designed to combine the multiple steps of face frame cabinet installation into one easy process. It works on stiles up to 1 1/4" thick (each). Integrated pilot-hole drilling guide guide flips out of the way so you can drive screws to connect the cabinets without removing or repositioning.
